meridianEMR and LABORIE announce Urodynamic Integration for Urologists

(Livingston, NJ – December 4, 2009) – meridianEMR and LABORIE announced today that they have successfully integrated their EMR and Urodynamic system for Urologists.

As the U.S. ramps up the implementation of EMRs in medical practices in order to lower costs, prevent errors, and improve patient care, meridianEMR and LABORIE MEDICAL have provided a great benefit to Urologists using LABORIE urodynamic systems.

The integration of LABORIE’s urodynamic test results directly into meridianEMR’s Urology specific EMR allows their Urology clients to experience the following benefits:

- Saves 20-25 minutes per procedure every time an insurer requires a narrative with the report.
- Special Laborie template automatically inserts standardized Urology comments for the various results, and all comments can be customized by each provider.
- Greater number of data points stored per report that is ideal for retrospective analysis
- Eliminates transcriptionist time, reducing a direct expense and improving physician quality of life.
- Report is available immediately instead of days later, if transcribing.
- CPT code selection assistance is provided, and billing information is entered automatically.
- ICD codes are selected automatically.

The financial gain resulting from the time that this integration saves is significant – approximately 25 minutes per study. An average of ten (10) Urodynamic studies each month will save a Urologist about four (4) hours per month, which translates into significant dollars.

“This is a perfect example of integrated technology to assist our joint clients in cutting down their time to produce exceptional narrative reports on their Urodynamic results. It is only appropriate that the leaders in Urodynamics and Urology Specific EMR collaborate”, Peter Bulla, Vice President of LABORIE MEDICAL stated.

About LABORIE MEDICAL TECHNOLOGIES, CORP.

LABORIE MEDICAL, based in Williston, Vermont in its 42nd year of business, is the worldwide market leader that designs and manufactures reference wireless Urodynamics technology to fit every budget and need - from small offices to world-class research institutions.
